ROUTES OF ENTRY: Skin Contact, Eye contact, Chronic Inhalation, Ingestion

EFFECTS OF ACUTE EXPOSURE: **Ingestion:** May cause marked local irritation of the gastrointestinal tract accompanied by nausea and vomiting. Signs of systemic effects may occur; including restlessness, apprehension, weakness, shortness of breath, cyanosis, convulsions and coma.
Death occurs as a result of paralysis of the respiratory muscles. **Eyes:** Eye contact causes painful damage and corneal irritation. **Skin:** Contact can cause redness, burns, pain and blistering. **Inhalation [of mist]:** Can cause nose, throat and respiratory tract irritation, coughing and headache.

EFFECTS OF CHRONIC EXPOSURE: Based upon the information available for similar products, it is anticipated that this material will be corrosive to the skin and eyes upon direct or prolonged contact. Solvent vapours or mists of product can produce irritation of mucous membranes. Ingestion can produce immediate burning pain in the mouth, throat and abdomen. Severe internal damage can occur if ingested and may be fatal. Exposure to ethyl alcohol concentrations over 1,000 ppm cause headaches, irritation of the eyes, nose and throat, and if long continued, drowsiness and lassitude, a loss of appetite and inability to concentrate.
